

Audiology Welcome Letter Ear & Hearing | Center for Neurosciences

Thank you for choosing Ear & Hearing at The Center for Neurosciences and Stephanie Bourn, Au.D., CCC-A or Mary Rose Goldstein, Au.D., CCC-A for your Audiology care. Dr. Bourn and Dr. Goldstein are highly qualified audiologists with specific expertise in pediatric and adult audiology, vestibular evaluations, electrophysiologic testing (ABR/ASSR, VEMP, ENOG), pediatric and adult hearing device management including hearing aids, surgically implantable hearing aids, bone anchored hearing implants, and cochlear implants.

Dr. Bourn and Dr. Goldstein work closely with Dr. Abraham Jacob, the region's most experienced board-certified, fellowship-trained neurotologist, who provides medical and surgical care for complex ear diseases. Should you require medical care related to your hearing loss, Audiology at Ear & Hearing can provide complete diagnostic care, treatment, and rehabilitation.

In preparation for your upcoming office appointment, please bring any previous hearing and/or balance testing results. Due to time constraints an appointment for an audiologic evaluation is limited to a 30-minute visit and does not allow time for discussion of hearing devices. Should you wish to have a hearing device assessment this can be scheduled for a separate visit OR you can request a 60-minute visit to allow time for audiologic evaluation and discussion of hearing device options.

As part of your new or established patient visit, in-office procedures may be required and billed to you or your insurance plan. Examples include but not limited to:

- 92557 – Comprehensive audiogram
- 92550 – Tympanometry & Reflexes
- 92570 – Acoustic immittance testing (tymps, reflexes, and decay)
- 92626 – Evaluation of auditory rehabilitation status
- 92537 – Caloric vestibular test with recording, bilateral; bithermal
- 92540 – Basic vestibular evaluation,
- 92541 – Spontaneous nystagmus test
- 92542 – Positional nystagmus test
- 92544 – Optokinetic nystagmus test
- 92545 – Oscillating tracking test
- 92585 – Auditory evoked potentials

While we strive to minimize office wait times, Dr. Bourn's and Dr. Goldstein's specialized practice with complex otologic patients often requires extended testing time. Therefore, clinics do sometimes run behind schedule, and we apologize for the inconvenience. If you are unable to wait, we would be happy to reschedule your appointment to another day.

Ear & Hearing actively participates in basic science and clinical research with focus on new treatments for hearing loss and skull base tumors. Should we find that you are a candidate, please consider enrolling in these research studies.

Thank you again for choosing Ear & Hearing at The Center for Neurosciences and Dr. Bourn and Dr. Goldstein for your Audiology needs. Should you have any questions, please contact us at 520-795-7750.

Sincerely,

Stephanie Bourn, Au.D., CCC-A

Mary Rose Goldstein, Au.D., CCC-A
